

How to Create a StoryScans™ Talking Image using Flip-Pal Toolbox software

Connect an external microphone (recommended)

Start Toolbox 4. If Windows gives a security alert dialog, click Continue.

Select **Record** menu item

Click the thumbnail of the scan to add sound to
and click **Record Audio**

Click **Start Recording** and talk into
microphone.

Click **Pause** to pause.

Click **Resume** to continue from where you
paused.

Click **End** when done recording.

Click **Listen** to review the recording.

Click **Re-record** to record from the start.

Click **Save** to create and save the talking image.
This may take a minute or so.

The talking image movie file is saved in the
/DCIM/StoryScans folder

Click **Open StoryScans Folder** to list the
talking image.

Double-click the file to play it using Windows
Media Player, or your default player for mp4
movie files.
